```
CPU: ▓▓▓▓▓▓▓▓▓▓▓▓▓▓▓▓ 99.97%
RAM: ▓▓▓▓▓▓▓▓▓▓▓▓▓▓▓▒ 91.2%
HEADROOM: insufficient

> process_blame
  culprit: "claude-code"
  impact: "critical"
  fix: "kill stale sessions"

ALERT: ram_pressure WARN→CRIT
```

Your machine is dying.

Your agent is spawning another subprocess.

I built the missing feedback loop.

SWIPE →

THE DATA

19% slower.

Devs using AI tools were 19% slower.

They **thought** they were 20% faster.

> **The bottleneck moved to hardware.**

Rudra Pratap Singh
@TheNextIdeaGuy rudraptpsingh

THE BLIND SPOT

Agents can read your machine.

They've never let it guide a single decision.

- ✓ Can shell out to ps aux
- ✓ Can parse top output
- ✓ Can read /proc/stat

- ✕ None self-regulate
- ✕ None adjust parallelism
- ✕ None pause at 90% RAM

REAL INCIDENT

I wasted 20 minutes debugging tests that weren't broken.

Vibe coding on my M4 MacBook Air.

Fans screaming. Tests flaking.

ACTIVITY MONITOR

5 Claude processes.
14GB on a 16GB machine.

My machine was drowning.

THE RECEIPTS

From the Claude Code repo:

#24960 Kernel panic. Forced power-off.

#18859 60GB overnight. Full crash.

#15487 24 sub-agents. System lockup.

#33963 OOM. No degradation.

The agent kept going while the machine was failing.

THE FIX

axon

Hardware awareness for AI agents.

- Local MCP server. 7 tools.
- Collects state every 2 seconds.
- **Zero network calls. Ever.**
- macOS + Linux. Open source.

> **Not monitoring. A decision-shaping interface.**

BEFORE / AFTER

WITHOUT AXON

Agent runs ps aux + top + vm_stat

Parses output. Guesses wrong.

~3,000 tokens.

WITH AXON

Agent calls `process_blame`

"Cursor (204% CPU) — restart it."

200 tokens. Done.

THE EXPERIMENT

4 agents. One machine.

BLIND

99.97%	51.66%
CPU	RAM

AXON-AWARE

48.05%	10.73%
CPU	RAM

No scheduler. Just a shared view of reality.

SETUP

Two commands.

```
$ brew install rudraptpsingh/tap/axon
```

```
$ axon setup
```

Configures Claude, Cursor, VS Code.

Agent restarts. Now it can see.

Give your agent eyes.

```
github.com/rudraptpsingh/axon
```

Ever lost work to an OOM crash?

Drop a comment — I'll help you set up axon.
